DETAILED ACTION

Allowable Subject Matter

Claims 1-8 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to an electro-acoustic converter comprising a stopper having adjacent portions that protrude from a surface of the frame where the contact portion of the terminal protrudes, a portion of the terminal being disposed between the adjacent portions of the stopper wherein the stopper is configured to restrict bending of the sheet metal constituting the terminal within a threshold value of reversibility of a material of the metal.

The closest prior art, Nagata et al. (US PGPub 2005/0201587 A1) discloses a speaker with a pair of plate-like leg portions opposed to each other in longitudinal direction of the frame, so that the leg portions exert a stopper function of preventing the terminals from being bent beyond the reversible limit. Nagata et al. fails to teach a portion of the terminal being disposed between the adjacent portions of the stopper wherein the stopper is configured to restrict bending of the sheet metal. These distinct features are evident in the independent claims and render the application allowable.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
